| EDUCATION  | <p><b>California State Polytechnic University - Pomona</b> May 2020</p> <p><i>B.S. Computer Science GPA: 3.2</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| EXPERIENCE | <p><b>Intel, Folsom, CA</b> November 2019 – May 2020<br/><i>Software Developer Intern</i></p> <ul style="list-style-type: none"> <li>Built an interactive web app using Flask and Bootstrap that showcases performance advantages of Intel Optane Memory. Resulted in a partnership with a Major Company to model their distributed storage system with the optimal configuration of Intel SSD's.</li> <li>Added a feature to an internal Intel web app that allows users to download graphs by rasterizing the SVG's generated by D3.js to .PNG format. Implemented in Angular.js.</li> <li>Developed a plugin to automatically provision any Python version and their necessary dependencies onto air-gapped servers.</li> <li>Implemented Angular data bindings to update title pages dynamically based on page content and a feature to hide and show columns of a grid, greatly improving its usability.</li> </ul> <p><b>Automation Engineering Intern</b> May 2019 – November 2019</p> <ul style="list-style-type: none"> <li>Created a development plan for employing machine learning to detect faulty SSD firmware using TensorFlow, MongoDB, and Docker. Architected database schema that indexes SSD performance metrics.</li> <li>Wrote a framework using Python that provisions and deploys Intel SSDs, saving over 25 employee-hours per week.</li> <li>Resolved firmware issues and created unit tests to assess code base performance and validate components in software.</li> <li>Followed agile methodologies under two-week sprints to distribute story points amongst team members, increasing responsiveness to unexpected changes of requirements.</li> </ul> <p><b>Printronic AutoID, Brea, CA</b> February 2018 – August 2018<br/><i>Software Engineering Intern</i></p> <ul style="list-style-type: none"> <li>Designed and developed a metrics aggregator for thermal printers to quickly analyze performance fluctuations resulting from feature changes. Written in Perl.</li> <li>Refactored schema of thermal output data for enhanced analysis and readability.</li> </ul> <p><b>Cal Poly, Pomona, CA - Professor Hao Ji</b> July 2017 – January 2018<br/><i>Machine Learning Research Intern</i></p> <ul style="list-style-type: none"> <li>Created a convolutional neural network to develop a real-time facial recognition system that detects expressions of drowsiness. Implemented using Python and TensorFlow.</li> </ul> |
| PROJECTS   | <p><b>Project Manager of Machine Learning Team A.I. Project</b></p> <ul style="list-style-type: none"> <li>Developed Speech-to-text (STT) and Text-to-speech (TTS) systems with TensorFlow to create a voice assistant that interprets verbal commands and performs various tasks. Used a LSTM (Long Short-Term Memory) RNN for SST/TTS and a low-pass filter to isolate speech from background noise.</li> <li>Directed two orthogonally positioned teams to meet project goals. Tracked team activity utilizing Gantt charts and organized weekly standup meetings.</li> </ul> <p><b>Event Calendar Web Service</b></p> <ul style="list-style-type: none"> <li>Developed an event calendar web service with MEAN stack (MongoDB, Express, Angular JS and Node.js).</li> <li>Held weekly scrum meetings, managed development cycles of project, and used GitHub Issues to organize features and bugs.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
